

# CHEMICAL PRODUCTS MANAGEMENT POLICY

July 28, 2023 - Rev. 03

Our commitment to chemical safety, environmental care, and worker protection drives the implementation of the principles mentioned below to ensure proper management and control of chemicals handled in the company:

## CHEMICAL SAFETY

With the aim of achieving maximum customer satisfaction in the production, design, and marketing of dyes, pigments, and chemical products for leather and textiles, we apply a management system in accordance with ISO 9001:2015 quality standards, which requires:

- Ensuring that our products meet the technical specifications and applicable legal and regulatory requirements.
- Guaranteeing delivery within the shortest possible timeframe or by agreed dates.
- Providing technical support.
- Offering courteous service from all departments.
- Innovating according to current and future market needs.
- Offering a good quality/price ratio.
- Continuously improving our processes and products.
- Minimizing strategic and operational risks to ensure the continuity of our activities.

The use of substances defined as hazardous in the manufacturing process of our products is limited, as it is of great interest in the sector. Thus, a commitment is established with the entire supply chain, and we work alongside the ZDHC (Zero Discharge of Hazardous Chemicals) program, aiming to comply with the restrictions stipulated by the most current version of its MRSL (Manufacturing Restricted Substances List). This list includes various groups of restricted substances for formulations used during the leather manufacturing process, where acceptable limits are set for each substance that may be present as impurities.

## CHEMICAL WASTE MANAGEMENT

We share society's growing concern for environmental issues, so we strive to minimize any possible impact and achieve sustainable development.

The wide variety of waste generated requires that it be classified and handled according to its type and associated risks, in order to comply with the Occupational Risk Prevention Law. Therefore, the most appropriate destination for each waste is provided according to its characteristics, which includes operations of collection, classification, storage, transportation, treatment, and disposal.

## HEALTHY AND SAFE WORKING CONDITIONS

A set of techniques and procedures is implemented to avoid or reduce workers' exposure to chemical agents.

To achieve this, the following actions are taken:

- The presence of hazardous chemical agents is avoided as much as possible.
- Emissions into the environment during production processes are eliminated or reduced.
- Ambient concentrations in work areas are maintained at safe levels.
- Direct contact between the chemical agent and the worker is avoided (respiratory, dermal, ocular, and skin protective equipment are provided and mandatory).

This management policy aims to define a work procedure that guarantees reliable products, ensures employee peace of mind, and fully meets our customers' expectations.

Sincerely,

**COLORANTES INDUSTRIALES, S.A.**
